

THE NEW ELECTRONICS PLIERS – small, in a big way!

In addition to the necessary expertise and skill, working on precision mechanics and electronics requires one thing above all else: precise, reliable and ergonomic tools with which the most delicate components can be safely gripped, positioned and snipped, even in confined spaces. The new STAHLWILLE electronics pliers were developed for this very purpose: five precision tools that cater for every possible requirement in their respective fields. What's more, they will perform over an extremely long service life.

PLIERS

MADE IN GERMANY

All applications covered

Electronics side cutters, mini electronics side cutters, electronics end cutters, electronics diagonal cutters and electronics flat-nose pliers are now available.

Perfect handling

High-grip materials, optimal ergonomics and smooth-running joints with double leaf spring reduce the effort required for cutting and gripping.

Precise and durable

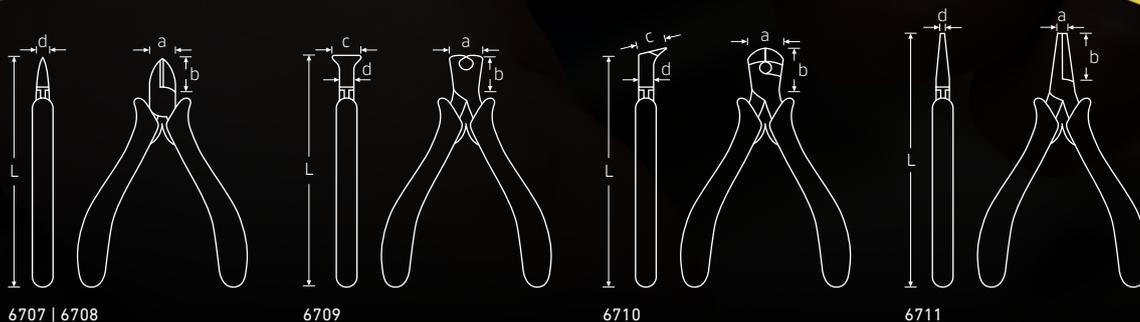

A throughhole joint and induction hardened cutting edges guarantee particularly high resistance and a very long service life.

Proven quality

All four cutting pliers comply with the DIN ISO 9654 industry standard. The flat-nose pliers meet the specifications of DIN ISO 9655.

IN A SET TOO – everything under control

The new electronics pliers are available individually or as a set. In the set, they are perfectly and safely housed in a tool insert with the proven Tool Control System (TCS). Wide recessed grips allow the pliers to be removed quickly, even when wearing gloves. The custom-made cutouts also clearly contrast with the black mat thanks to their distinctive yellow color. So you only need to take one look to see if everything is complete. Put a stop to the hassle of losing tools!

Electronics liers
