Complete calibration system Measuring r.1-400N·m for transducers

Features.

- The electronic perfectControl calibration device with manual drive significantly reduces the effort and time required for calibrations and adjustments of torque wrenches.
- Measurement without shifting the point of application of force
- avoidance of incorrect measurements with the help of the precisely mounted spindle and the ergonomically shaped handwheel
- extremely precise calibration through optimisation of the bearing and the square receptacles of the transducers
- Quick and easy change of transducers due to QuickRelease locking mechanism
- Convenient key operation for clockwise and anticlockwise measurements with automatic speed adjustment
- Time-saving by fixing the bridge support with an eccentric clamp that can be operated with one hand
- transfer of measured values via USB interface to a PC for further processing and archiving
- a calibration certificate can be printed out after calibration or saved as a PDF file
- input and output calibrations can be documented
- DIN EN ISO 6789 is supported in numerous languages during calibration. Other standards and factory specifications on request
- Can be upgraded to perfectControl calibration device no. 7794-3 for angle wrenches
- calibrations up to 1000 N·m with the help of the easy-to-mount extension no. 7791-1
- registered design, patents pending
- triggering and measuring torque spanners can be calibrated
- Calibration of transducers with the aid of torque reference spanners No. 7770-100 and 7770-1000 possible on request
